DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, drawn to an air terminal comprising a damper, classified in class 454, subclass 325.
 - II. Claims 11-13, drawn to a terminal comprising a baffle plate, classified in class 454, subclass 302.

The inventions are distinct, each from the other because of the following reasons:

2. In the instant case, invention of Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I does not need the adjustable baffle plate for patentability. The subcombination has separate utility such as being the only air flow controlling member.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, r
